

[This listing of claims will replace all prior versions, and listings, of claims in the application:]

**Listing of Claims:**

1. – 6. Canceled

7. (Amended) A method for presenting test preparation questions, comprising the steps of:  
(i) on a display device, displaying to a user a first question to which a response is requested;  
(ii) receiving from the user a weighted response to the first question; and  
(iii) when the user's response in step (ii) is correct, repeating steps (i) and (ii) for the first question when the weight meets a predetermined criteria.

~~The method of claim 1,~~ wherein the weight comprises an amount of time in which the user responded to the question.

8. – 13. Canceled

14. (Amended) A system for presenting test preparation questions to a user, comprising:  
\_\_\_\_\_ a processor;  
\_\_\_\_\_ a memory comprising computer readable instructions that, when executed by the processor, cause a computer to perform the steps of:  
(i) on a display device, displaying to a user a first question to which a response is requested;  
(ii) receiving from the user a weighted response to the first question; and  
(iii) when the user's response in step (ii) is correct, repeating steps (i) and (ii) for the first question when the weight meets a predetermined criteria.~~The system of claim~~  
8,

wherein the weight comprises an amount of time in which the user responded to the question.

15. – 20. Canceled

21. (Amended) A computer readable medium storing computer readable instructions that, when executed by a processor, cause a computer to perform the steps of:

(i) on a display device, displaying to a user a first question to which a response is requested;

(ii) receiving from the user a weighted response to the first question; and  
when the user's response in step (ii) is correct, repeating steps (i) and (ii) for the first question  
when the weight meets a predetermined criteria.~~The computer readable medium of claim 15,~~

wherein the weight comprises an amount of time in which the user responded to the question.

22. (New) The method of claim 7, further comprising the step of:

(iv) averaging all weights received in response to displaying the first question during repetitions of steps (i) and (ii);

wherein the predetermined criteria comprises the average weight falling outside of a predetermined time range corresponding to the first question.

23. (New) The method of claim 7, further comprising the step of:

(iv) averaging the most recent  $n$  weights received in response to displaying the first question during repetitions of steps (i) and (ii), where  $n$  is a positive integer;

wherein the predetermined criteria comprises the average weight falling outside of a predetermined time range corresponding to the first question.

24. (New) The method of claim 7, wherein the predetermined criteria comprises the amount of time in which the user responded to the first question provides an indication that the user was guessing.

25. (New) The method of claim 24, wherein the amount of time in which the user responded to the first question is larger than a predetermined average response time corresponding to the first question.

26. (New) The method of claim 7, further comprising the step of marking the first question as complete when the user's response in step (ii) is correct and the weight does not meet the predetermined criteria.

27. (New) The method of claim 7, further comprising the step of repeating steps (i) and (ii) for the first question when the user's response in step (ii) is incorrect.

28. (New) The system of claim 14, wherein the computer readable instructions further comprise the step of:

- (iv) averaging all weights received in response to displaying the first question during repetitions of steps (i) and (ii);

wherein the predetermined criteria comprises the average weight falling outside of a predetermined time range corresponding to the first question.

29. (New) The system of claim 14, wherein the computer readable instructions further comprise the step of:

- (iv) averaging the most recent  $n$  weights received in response to displaying the first question during repetitions of steps (i) and (ii), where  $n$  is a positive integer;

wherein the predetermined criteria comprises the average weight falling outside of a predetermined time range corresponding to the first question.

30. (New) The system of claim 14, wherein the predetermined criteria comprises the amount of time in which the user responded to the first question provides an indication that the user was guessing.

31. (New) The system of claim 30, wherein the amount of time in which the user responded to the first question is larger than a predetermined average response time corresponding to the first question.

32. (New) The system of claim 14, wherein the computer readable instructions further comprise the step of marking the first question as complete when the user's response in step (ii) is correct and the weight does not meet the predetermined criteria.

33. (New) The system of claim 14, wherein the computer readable instructions further comprise the step of repeating steps (i) and (ii) for the first question when the user's response in step (ii) is incorrect.

34. (New) The computer readable medium of claim 21, wherein the computer readable instructions further comprise the step of:

- (iv) averaging all weights received in response to displaying the first question during repetitions of steps (i) and (ii);

wherein the predetermined criteria comprises the average weight falling outside of a predetermined time range corresponding to the first question.

35. (New) The computer readable medium of claim 21, wherein the computer readable instructions further comprise the step of:

- (iv) averaging the most recent  $n$  weights received in response to displaying the first question during repetitions of steps (i) and (ii), where  $n$  is a positive integer;

wherein the predetermined criteria comprises the average weight falling outside of a predetermined time range corresponding to the first question.

36. (New) The computer readable medium of claim 21, wherein the predetermined criteria comprises the amount of time in which the user responded to the first question provides an indication that the user was guessing.

37. (New) The computer readable medium of claim 36, wherein the amount of time in which the user responded to the first question is larger than a predetermined average response time corresponding to the first question.

38. (New) The computer readable medium of claim 21, wherein the computer readable instructions further comprise the step of marking the first question as complete when the user's response in step (ii) is correct and the weight does not meet the predetermined criteria.

39. (New) The computer readable medium of claim 21, wherein the computer readable instructions further comprise the step of repeating steps (i) and (ii) for the first question when the user's response in step (ii) is incorrect.
